

TASK 4: ANALYSING PROJECTS REGARDING INTEROPERABILITY

DISTRIBUTION 19.05.2025, PRESENTATION ON 26.05.2025

Select one project of your team from the exercise 1, which needs interoperability. Your tasks are to elaborate the following questions:

- Why is interoperability relevant in your project?
- Where is interoperability needed in your project? – use the four levels of interoperability of the EIF 2.0 to demonstrate these needs.
- What interoperability / standards building blocks are used in your project to implement interoperability? – identify relevant 'Building Blocks' along the interoperability levels of the EIF 2.0 (see e.g. Case Study)
- Who develops and maintains these building blocks?

Evaluate also whether the project owners applied Government Enterprise Architecture concepts to develop the solution for interoperable public service provisioning

Upload your presentation until Monday 25th May and present the results of the Interoperability needs of your project in the exercise class on 26th May – each group has max 8 minutes for the presentation. Max 5 groups will be able to present.

Ensure to put the URLs to the project and concepts you are using on the slides.

Only people presenting receive the tick mark for presentation.
